不要超過100行

變數命名原則

```
let numberOfStudents
```

```
const numberOfLegs
```

```
function setBackgroundColor()
```

```
class Student{}
```

TREE

```
function tree(n) {  
    printTreeTop(n);  
    printTreeBottom(n);  
}  
function printTreeTop(n) {  
    // repeatchar(' ', i) + repeatchar('*', j)  
}  
function printTreeBottom(n) {  
    // repeatchar(' ', i) + '*'  
}  
function repeatchar(n, arg_char) {

- Document Object Model
- Browser Object Model
- JavaScript ES6
- jQuery & AJAX

Document Object Model

- Introduction
- DOM Programming Interface
- DOM Document Object
- DOM Navigation
- DOM Events
- DOM EventListener
- DOM HTML & CSS

Document Object Model

- A programming interface for HTML and XML documents
- Be independent of any particular programming language
- DOM represents an HTML or XML document in memory

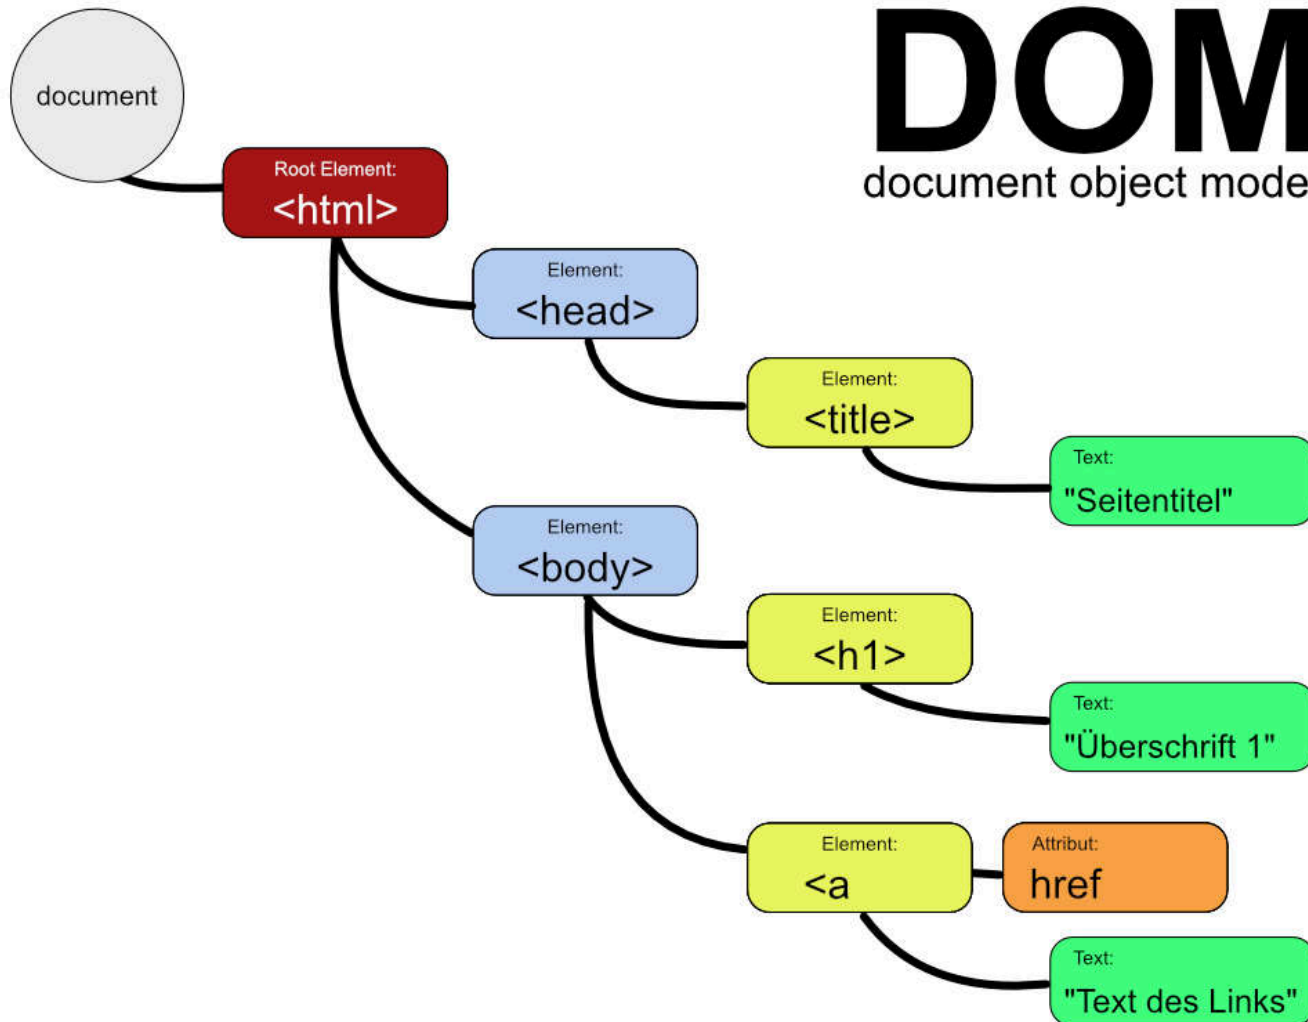

Document Object Model

- Document
 - 這份文件
- Element
 - 文件內的各個標籤，因此像是 `<div>`、`<p>` 等
- Text
 - 被各個標籤包起來的文字，舉例來說在 `<h1>Hello CGU !!</h1>`
- Attribute
 - 各個標籤內的相關屬性
 - HTML, CSS, Event

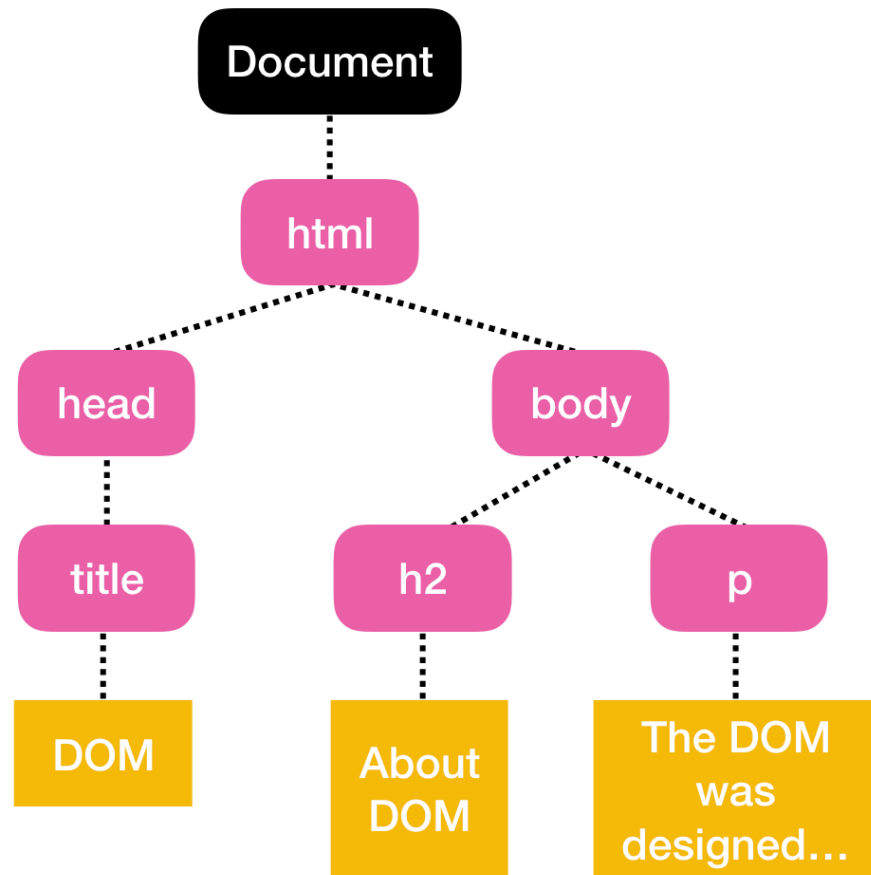

DOM

document object model

```
<!doctype html>
<html>
  <head>
    <title>
      DOM
    </title>
  </head>
  <h2>
    About DOM

The DOM Tree and Nodes

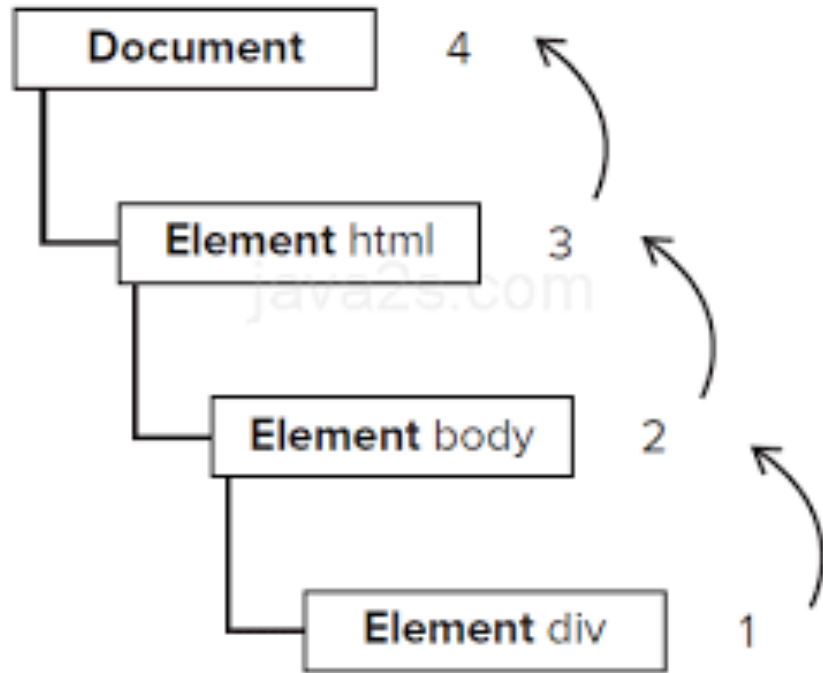

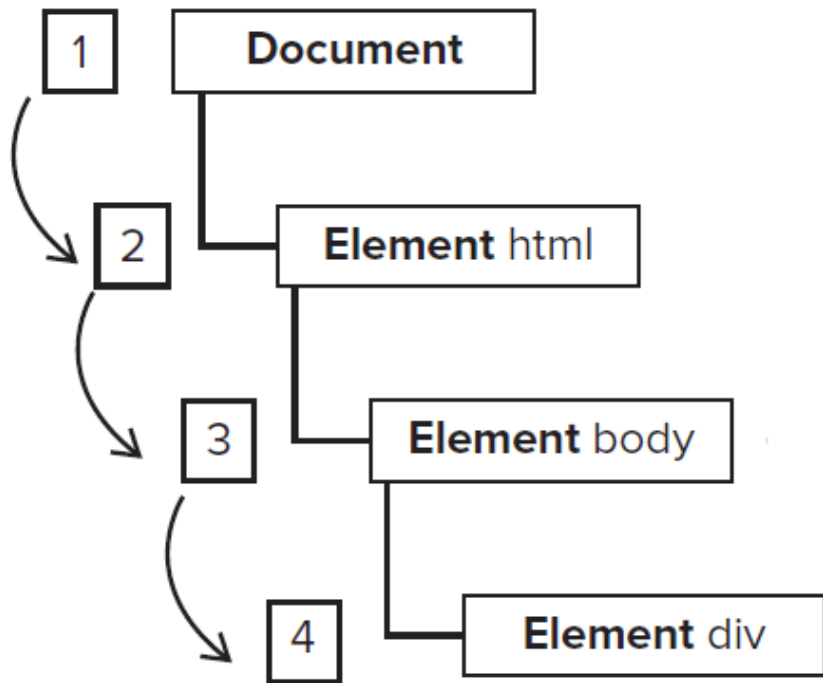

- Element nodes
- Text nodes
- Comment nodes

Node Type	Value	Example
ELEMENT_NODE	1	The <code><body></code> element
TEXT_NODE	3	Text that is not part of an element
COMMENT_NODE	8	<code><!-- an HTML comment --></code>

Finding HTML Elements

Method

Description

`document.getElementById(id)`

Find an element by element id

`document.getElementsByTagName(name)`

Find elements by tag name

`document.getElementsByClassName(name)`

Find elements by class name

`document.querySelectorAll(CSS Selectors)`

Find elements by CSS Selectors

`document.querySelector(CSS Selector)`

Find elements by CSS Selector

Changing HTML Elements

Property

Description

element.innerHTML = new html content

Change the inner HTML of an element

element.attribute = new value

Change the attribute value of an HTML element

element.style.property = new style

Change the style of an HTML element

Method

Description

element.setAttribute(attribute, value)

Change the attribute value of an HTML element

Elements.Text

- **innerText** :
 - "This element has extra spacing and contains a span element."
- **innerHTML** :
 - "This element has extra spacing and contains `a span element`."
- **textContent** :
 - "This element has extra spacing and contains a span element."

Adding and Deleting Elements

Method	Description
<code>document.createElement(<i>element</i>)</code>	Create an HTML element
<code>document.removeChild(<i>element</i>)</code>	Remove an HTML element
<code>document.appendChild(<i>element</i>)</code>	Add an HTML element
<code>document.replaceChild(<i>new</i>, <i>old</i>)</code>	Replace an HTML element
<code>document.write(<i>text</i>)</code>	Write into the HTML output stream

An Example

HTML

```
<html>
<head>
  <title>DOM</title>
</head>
<body>
  <p id="imHere">Hello</p>
  <button onclick="changeColor('black');">black</button>
</body>
</html>
```

`document.getElementById('imHere')`

`document.getElementsByTagName('p')`

```
<html>
```

```
<head>
```

```
<title>My Document</title>
```

```
<script type="text/javascript">
```

```
function change() {
```

```
    var header = document.getElementsByTagName("H1").item(0);
```

```
    header.innerHTML = "CSIE@CGU";
```

```
    var para = document.getElementsByTagName("P").item(0);
```

```
    para.innerHTML = "怎麼那麼棒！！.";
```

```
}
```

```
</script>
```

```
</head>
```

```
<body>
```

```
<input type="button" value="Change this document." onclick="change()">
```

```
<h1>CGU</h1>
```

```
<p>好棒棒</p>
```

```
</body>
```

```
</head>
```

Returns the code name of the browser

appVersion

Returns the version information of the browser

cookieEnabled

Determines whether cookies are enabled in the browser

geolocation

Returns a Geolocation object that can be used to locate the user's position

language

Returns the language of the browser

onLine

Determines whether the browser is online

platform

Returns for which platform the browser is compiled

product

Returns the engine name of the browser

userAgent

Returns the user-agent header sent by the browser to the server

  var t = document.createTextNode("body {font: 20px verdana;}");
  x.appendChild(t);
  document.head.appendChild(x);
}
</script>
```

DOM Events Object

allow JavaScript to register different event handlers on elements in an HTML document

- event can be something the browser does
- Or something a user does
- Some examples of HTML events
 - An HTML web page has finished loading
 - An HTML input field was changed
 - An HTML button was clicked

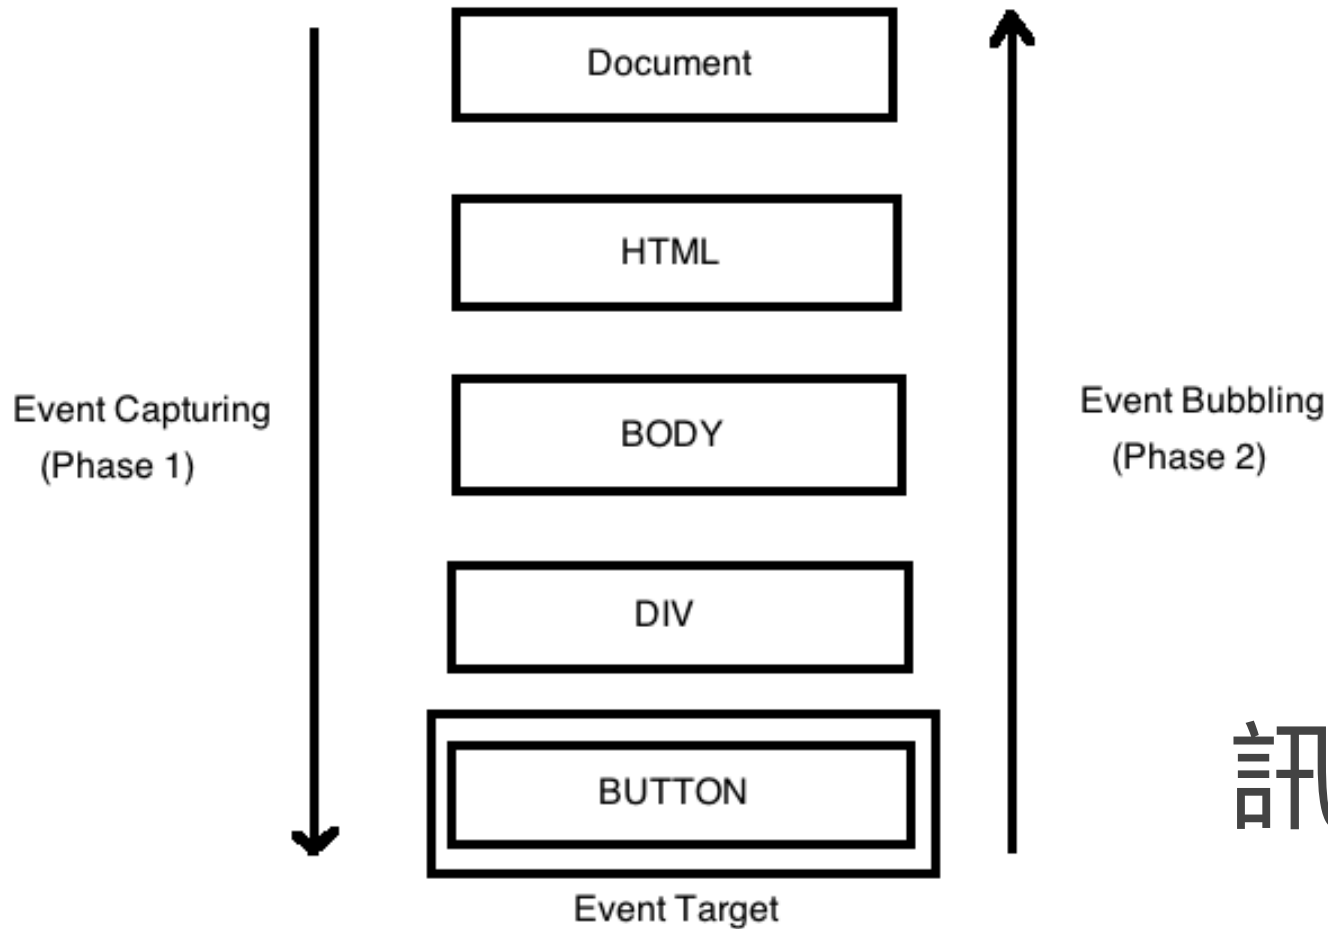

Common HTML Events

onchange	An HTML element has been changed
onclick	The user clicks an HTML element
onmouseover	The user moves the mouse over an HTML element
onmouseout	The user moves the mouse away from an HTML element
onkeydown	The user pushes a keyboard key
onload	The browser has finished loading the page

Event Propagation

- `addEventListener ()`
 - event
 - handler
 - boolean value
 - True, capture
 - False, bubbling
- `stopPropagation()`

訊息控制

訊息控制 capturing

事件捕獲(capture)

Browser Object Model

經過瀏覽器大戰後
一起納入了
HTML5 的標準

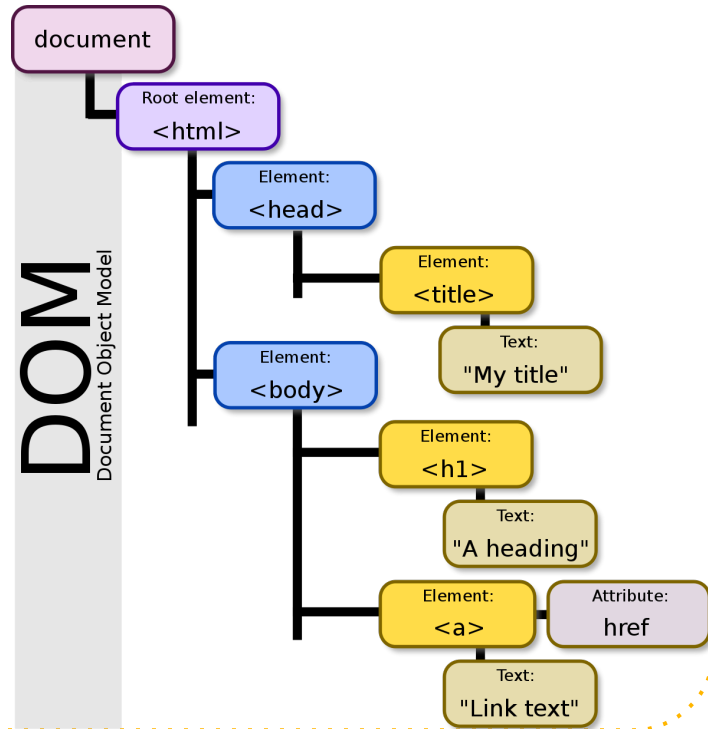

Document Object Model 應用

- internet of things (IOT)
 - 房子
 - 前窗戶
 - 窗簾
 - 窗戶
 - 打開, 關閉
 - 後窗戶
 - 前門
 - 後門

Conclusion

- Introduction
- DOM Programming Interface
- DOM Document Object
- DOM Navigation
- DOM Events
- DOM EventListener
- DOM HTML & CSS
